SUMMARY

I am a front-end web developer, recently earned a certificate in full stack development from University of Washington, within newly developed skills in HTML,CSS and JavaScript.I applied aspects of UX and agile development in a recent project where I worked in a team of four to develop a single-page 'Snack Finder' app that helps people to find the cheapest and closest snack provider around them."In the next phase of my career, I not only want to use my web developed skills to make the web projects look beautiful, but also want to work on the technically challenging facets of the projects too. I am eager to combine my background in a position with my technical skills to create innovative and interactive web designs.
